

PERMEABLE PAVING

JAY RIENTS
UNILOCK CORP.

Permeable paving can greatly reduce storm water run-off, reduce retention requirements, increase groundwater recharge, reduce downstream flows and bank erosion, and may be beneficial when applying for LEED certification.

Please join us for a free, informational seminar and discussion on how you can integrate permeable paving into your landscape as part of a smart, environmentally sound solution to your storm water management and site development plan. This presentation qualifies for 1 hr. AIA/CES credit.

Wednesday, January 31st, 2007
9:00 – 11:00 am

Sheraton Burlington Hotel & Conference Center
870 Williston Road · Burlington, Vermont 05403
Phone: (802) 865-6600
